**JOURNAL OF  
DISCRETE  
ALGORITHMS**

[www.elsevier.com/locate/jda](http://www.elsevier.com/locate/jda)

## Subject Index

- Acronym extraction
  - Adaptive text mining: inferring structure from sequences, 137
- Adaptive sequences
  - Shift error detection in standardized exams, 313
- Adaptive techniques
  - Adaptive text mining: inferring structure from sequences, 137
- Alignment
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Alpha-helix prediction
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- Approximate algorithms
  - Probabilistic proximity searching algorithms based on compact partitions, 115
- Approximation
  - Approximating schedules for dynamic process graphs efficiently, 471
- Approximation algorithms
  - The longest common subsequence problem for arc-annotated sequences, 257; Approximation algorithms for Hamming clustering problems, 289; Budget constrained minimum cost connected medians, 453
- Asteroidal triple-free graphs
  - Recognizing graphs without asteroidal triples, 439
- Automata theory
  - From searching text to querying XML streams, 17
- Bioinformatics
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- Bit-parallelism
  - Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
- Branch-and-bound
  - A polynomial time upper bound for the number of contacts in the HP-model on the face-centered-cubic lattice (FCC), 161
- Breakpoints
  - A lower bound for the breakpoint phylogeny problem, 229
- Compact directed acyclic word graphs
  - Compact directed acyclic word graphs for a sliding window, 33
- Comparative genomics
  - Structural properties and tractability results for linear synteny, 207
- Compressed pattern matching
  - Indexing text using the Ziv–Lempel trie, 87; Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
- Compressed text
  - Indexing text using the Ziv–Lempel trie, 87
- Compression algorithms
  - Adaptive text mining: inferring structure from sequences, 137
- Computational biology
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Computational geometry
  - Packing two disks into a polygonal environment, 373
- Counting
  - Selecting distances in arrangements of hyperplanes spanned by points, 333
- Data streams
  - From searching text to querying XML streams, 17
- Diameter
  - Optimal fault-tolerant routings with small routing tables for  $k$ -connected graphs, 517

- Disk packing
  - Packing two disks into a polygonal environment, 373
- Distance selection problem
  - Selecting distances in arrangements of hyperplanes spanned by points, 333
- Distance-hereditary graphs
  - Networks with small stretch number, 383
- Distributed algorithms
  - Computing input multiplicity in anonymous synchronous networks with dynamic faults, 425
- Distributed computing
  - Optimal fault-tolerant routings with small routing tables for  $k$ -connected graphs, 517
- Dynamic faults
  - Computing input multiplicity in anonymous synchronous networks with dynamic faults, 425
- Dynamic process graphs
  - Approximating schedules for dynamic process graphs efficiently, 471
- Dynamic programming
  - The longest common subsequence problem for arc-annotated sequences, 257
- Edit distance
  - A dynamic edit distance table, 303
- Evolutionary tree
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Face-centered-cubic-lattice (FCC)
  - A polynomial time upper bound for the number of contacts in the HP-model on the face-centered-cubic lattice (FCC), 161
- Fault tolerance
  - Computing input multiplicity in anonymous synchronous networks with dynamic faults, 425;
  - Optimal fault-tolerant routings with small routing tables for  $k$ -connected graphs, 517
- Fixed routing
  - Optimal fault-tolerant routings with small routing tables for  $k$ -connected graphs, 517
- Gene order data
  - A lower bound for the breakpoint phylogeny problem, 229
- Generic entity extraction
  - Adaptive text mining: inferring structure from sequences, 137
- Genome comparison
  - Replacing suffix trees with enhanced suffix arrays, 53
- Genome rearrangements
  - Structural properties and tractability results for linear synteny, 207
- Graph algorithms
  - Recognizing graphs without asteroidal triples, 439
- Graph class characterization
  - Networks with small stretch number, 383
- Group Steiner Tree Problem
  - Budget constrained minimum cost connected medians, 453
- Hamming distance
  - Approximation algorithms for Hamming clustering problems, 289
- Hierarchy of graph classes
  - Networks with small stretch number, 383
- Homology detection
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- HP-model
  - A polynomial time upper bound for the number of contacts in the HP-model on the face-centered-cubic lattice (FCC), 161
- Incremental/decremental edit distance
  - A dynamic edit distance table, 303
- Input collection
  - Computing input multiplicity in anonymous synchronous networks with dynamic faults, 425
- Integer programming
  - Approximation algorithms for Hamming clustering problems, 289
- $k$ -Median Problem
  - Budget constrained minimum cost connected medians, 453
- Keyphrase extraction
  - Adaptive text mining: inferring structure from sequences, 137
- Knotting graph
  - Recognizing graphs without asteroidal triples, 439
- Lagrange multiplies
  - A lower bound for the breakpoint phylogeny problem, 229
- Lattice proteins
  - A polynomial time upper bound for the number of contacts in the HP-model on the face-centered-cubic lattice (FCC), 161
- Linear-time algorithm
  - Compact directed acyclic word graphs for a sliding window, 33
- Longest common subsequence
  - The longest common subsequence problem for arc-annotated sequences, 257
- Lower bound
  - Selecting distances in arrangements of hyperplanes spanned by points, 333

- Lower bounds
  - A lower bound for the breakpoint phylogeny problem, 229
- LZ77
  - Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
- LZ78
  - Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
- LZW
  - Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
- MAX SNP-hard
  - The longest common subsequence problem for arc-annotated sequences, 257
- Maximum independent set
  - The longest common subsequence problem for arc-annotated sequences, 257
- Median
  - Budget constrained minimum cost connected medians, 453
- Metric spaces
  - Probabilistic proximity searching algorithms based on compact partitions, 115
- Minimum cost flow
  - Optimizing cost flows by edge cost and capacity upgrade, 407
- Multiple alignment
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Multiple-choice examinations
  - Shift error detection in standardized exams, 313
- Network design
  - Optimizing cost flows by edge cost and capacity upgrade, 407; Budget constrained minimum cost connected medians, 453
- Network upgrade
  - Optimizing cost flows by edge cost and capacity upgrade, 407
- NP-hardness
  - Approximation algorithms for Hamming clustering problems, 289; Budget constrained minimum cost connected medians, 453
- On-line text compression
  - Compact directed acyclic word graphs for a sliding window, 33
- Optical networks
  - Approximating call-scheduling makespan in all-optical networks, 501
- Origami
  - Packing two disks into a polygonal environment, 373
- Overlap
  - Approximating schedules for dynamic process graphs efficiently, 471
- $p$ -clustering problem
  - Approximation algorithms for Hamming clustering problems, 289
- Parallel processing
  - Approximating schedules for dynamic process graphs efficiently, 471
- Parametric search
  - Selecting distances in arrangements of hyperplanes spanned by points, 333
- Pattern matching
  - Some string matching problems from Bioinformatics which still need better solutions, 3; Replacing suffix trees with enhanced suffix arrays, 53
- Phrase hierarchies
  - Adaptive text mining: inferring structure from sequences, 137
- Phylogenetic tree
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Phylogenetics
  - A lower bound for the breakpoint phylogeny problem, 229
- Probabilistic algorithms
  - Probabilistic proximity searching algorithms based on compact partitions, 115
- Probabilistic sequence matching
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- Probabilistic sequence searching
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- Profile searching
  - Some string matching problems from Bioinformatics which still need better solutions, 3
- Protein folding
  - A polynomial time upper bound for the number of contacts in the HP-model on the face-centered-cubic lattice (FCC), 161
- Query languages
  - From searching text to querying XML streams, 17
- Range queries
  - Probabilistic proximity searching algorithms based on compact partitions, 115
- Recognition algorithm
  - Recognizing graphs without asteroidal triples, 439

- Recognition problem
  - Networks with small stretch number, 383
- Repeat analysis
  - Replacing suffix trees with enhanced suffix arrays, 53
- Rings
  - Approximating call-scheduling makespan in all-optical networks, 501
- RNA structural similarity comparison
  - The longest common subsequence problem for arc-annotated sequences, 257
- Routing table
  - Optimal fault-tolerant routings with small routing tables for  $k$ -connected graphs, 517
- Scheduling
  - Approximating schedules for dynamic process graphs efficiently, 471; Approximating call-scheduling makespan in all-optical networks, 501
- Scheduling problems
  - Structural properties and tractability results for linear synteny, 207
- Self-indexing
  - Indexing text using the Ziv–Lempel trie, 87
- Sensitivity analysis
  - Parametric multiple sequence alignment and phylogeny construction, 271
- Sequence annotation
  - The longest common subsequence problem for arc-annotated sequences, 257
- Series-parallel graphs
  - Optimizing cost flows by edge cost and capacity upgrade, 407
- Similarity searching
  - Probabilistic proximity searching algorithms based on compact partitions, 115
- Sliding window
  - Compact directed acyclic word graphs for a sliding window, 33
- Standardized testing
  - Shift error detection in standardized exams, 313
- Stretch number
  - Networks with small stretch number, 383
- String alignment
  - Shift error detection in standardized exams, 313
- String matching
  - Some string matching problems from Bioinformatics which still need better solutions, 3; A dynamic edit distance table, 303
- Succinct data structures
  - Indexing text using the Ziv–Lempel trie, 87
- Suffix array
  - Replacing suffix trees with enhanced suffix arrays, 53
- Suffix tree
  - Replacing suffix trees with enhanced suffix arrays, 53
- Synthetic distance
  - Structural properties and tractability results for linear synteny, 207
- Text categorization
  - Adaptive text mining: inferring structure from sequences, 137
- Text mining
  - Adaptive text mining: inferring structure from sequences, 137
- Transportation problems
  - Optimizing cost flows by edge cost and capacity upgrade, 407
- Word segmentation
  - Adaptive text mining: inferring structure from sequences, 137
- XML
  - From searching text to querying XML streams, 17
- XPath
  - From searching text to querying XML streams, 17
- Ziv–Lempel compression
  - Practical and flexible pattern matching over Ziv–Lempel compressed text, 347
